INTERNATIONAL JOURNAL OF QUANTUM CHEMISTRY, VOL. 46, 751–754 (1993)

Subject Index to Volumes 45 and 46

Please note that A refers to Volume 45 and B refers to Volume 46.

4-component Dirac spinors, 573A
4-currents, 573A
4-potentials, 573A
Ab initio, 1B, 19B, 43A, 51A, 59A, 73B, 87B, 119B, 123A, 137B, 159B
Ab initio calculation, 535B
Ab initio calculations, 231B, 709A, 735A, 758A
Ab initio Hartree–Fock (HF)-optimized structures, 15A
Ab initio MO method, 433A
Ab initio molecular orbital studies, 183B
Ab initio molecular orbital theory, 271B
Ab initio wave functions, 623B
Aggregation, 735A
Algebraic densities, 689B
All-electron ab initio CASSCF calculations, 145B
All-electron ab initio Hartree–Fock (RHF) calculations, 159B
Alternant benzenoids, 167A
Alternant hydrocarbons, 303A
AM1 method, 97A
Anharmonic oscillator problem, 251A
Antiferromagnetic spin array, 391A
Aromatic compounds, 127B
Aromatic hydrocarbon ions, 137B
Asymptotic lines of energy, 303A
Atomic binding energies, 675B
Atomic charges, 211B
Atomic integrals, 445A
Atomic multipole moments, 239B
Atomic orbitals, 619A
Atomic theorems, 189A

BF_2 radical, 295A
Backbone/side-group interactions, 271B
Baker's transformations, 425B
Basis functions, 73B
Basis functions (BF), 563A
Basis set, 319B, 623B
Basis sets, 183B, 433A
Benchmark values, 21A
Binding energies, 591A
Bloch sums, 101B
Bonding, 145B
Broken symmetries, 339B
Brueckner optimization, 735B
Brussels–Austin groups, 425B

C_{60}, 81B
C^2-DIIS convergence acceleration algorithm, 31A
CAS–SCF active spaces, 133A
Chirality, 649A
Clementi, Enrico, 507A
Closed-shell systems, 709A
Closure property, 105A
Cluster-size convergence, 87B
CNDO Framework, 711B
Cohesive energy, 55B
Colle–Salvetti second-order reduced density matrix (2-matrix), 583B
Complete active space (CAS) SCF method, 591A
Complex coordinate method, 365B
Complex Coordinate Scattering Theory, 343B
Complex dilated Hamiltonian, 365B
Complex energy resonances, 375B
Complex hydrodynamics, 39B
Complex scaling, 415B
Computational quantum chemistry, 689A
Conformational analyses, 211B
Constrained geometry optimizations, 109B
Coplanarity, 701B
Correlation energies, 563A
Correlation energy, 55B
Correlation terms, 87A
Coulomb singularity, 383B
Coupled-cluster equations, 409A
Crystal field, 55B
Crystal field effects, 73B
Crystal field study, 109B

Data parallel computational scheme, 27B
Density functional theory, 689B
Density-functional theory, 43A
Density matrix, 263A
Dilation operators, 391B
Dispersion-energy coefficients, 349A

DNA, 701B
DNA base pairs, 483B, 499B
Donor–acceptor polyynes, 19B

Eigenfunctions, 385A
Eigenvalue distributions, 303A
Electron attachment, 719A
Electron capture processes, 709A
Electron density, 55B
Electron number density $\rho(\mathbf{r})$, 689B
Electron propagator method, 719A
Electron repulsion, 577B
Electronic properties, 87B
Electronic states, 145B
Electrostatic energy formulation, 711B
Electrostatic potential (EP), 127B
Energy functionals, 333A
Ether links, 171B
Ewald method, 101B
Excitation energy, 295B
Exciton hopping, 295B
Exciton-depleting processes, 295B
Exocyclic rings, 701B

Finite-element method, 637A
Fock–Bargmann space, 515B
Forward recursion, 3A
Fourier series, 545A
Fourier transform, 619A
Fractional electronic charges, 635B
Free electrons, 105A
Frequency shifts, 758A
Friedrichs model, 425B

G–C base pairs, 483B
Gas atom/surface physisorption interaction potential, 343B
General linear operators, 505B
Geometries, 591A
Geometry optimization, 119B
Glycine receptor, 183B
Graph factorization, 519B
Graph theory, 167A

H-bond dynamics, 483B
H-bond patterns, 499B
Harmonic oscillator tensors, 257B
Hartmann potential, 209A
Hartree–Fock, 665A
Hartree–Fock (HF) theory, 59A
Hartree–Fock approximation, 735B
Hartree–Fock atomic orbitals, 609A
Hartree–Fock calculations, 81B, 87B
Hartree–Fock natural orbitals, 133A
Heliumlike ions, 689B
Hermitian operator, 105A
Homonuclear diatomic molecules, 719A
Hubbard approximation, 577B
Husimi representation, 263A
Hydration, 97A
Hydrogen atom, 609B
Hydrogen bonding, 239B
Hylleraas–CI calculations, 87A
Hyperboloidal boundary, 609B
Hyperpolarizability, 19B
Hyperspherical coordinates, 385A

Icosahedral symmetry, 81B
Incomplete gamma function, 3A
Infinite one-dimensional systems, 391A
Infinite repulsion, 577B
Infrared intensities, 735A
Infrared spectrum, 735A
Integrity bases, 471A
Intermolecular interactions, 191B
Internal coordinates, 471A
Internal rotation barrier, 123A
Interstellar medium (ISM), 231B
Intramolecular proton transfer, 689A
Ionization potentials, 651B
Irreducible tensors, 257B
Irreversibility, 339B, 401B, 419B
Isocodal atoms, 635B

Jordan blocks, 505B

Kepler–Coulomb system, 209A
Kramers' theory, 235A
Kustaanheimo–Stiefel transformation, 209A

Laplace transform, 545A
Large molecular complexes, 711B
Large-scale computers, 39B
Large-scale molecular dynamics (MD) simulations, 27B
Lax–Phillips scattering theory, 401B
Linking simulations, 511A
Local density functional calculations, 15A
Low-lying electronic states, 51A, 295A
Lower bounds, 675B
Lower-bound calculation, 445A
Lowest occupied molecular orbital (LOMO), 635B
Lubricant degradation, 171B
Lyapunov converters, 391B

Many-electron wave functions, 735B

Many-particle system, 735B
Matrix elements, 257B
McClelland's graph-factorization method, 519B
MCSCF method, 535B
Misra–Prigogine–Courbage Nonunitary Transformation Theory of Irreversibility, 419B
Mixing dynamical systems, 425B
Molecular aggregate, 295B
Molecular electronic spectroscopy, 689A
Molecular geometry, 87B
Molecular geometry optimizations, 679A
Molecular orbitals, 651B
Molecular potential energy functions, 471A
Molecular simulation, 39B
Möller–Plesset perturbation theory, 623B
Møller–Plesset expansion, 409A
Momentum space, 609A
Monosubstituted benzenes, 651B
MOPAC program, 651B
Mulliken population analysis, 211B
Multiconfigurational second-order perturbation theory, 591A
Multiple time-step method, 59A
Multiple-transition-point WKB treatment, 375B
Multireference single- and double-excitation configuration interaction (MRSDCI) calculations, 295A
Mutually orthogonal orbital sets, 587A

N_4 molecule, 119B
Nearest-neighbor communications, 27B
Networks of workstations, 665A
Neutral lipids, 211B
Non-N-representability, 583B
Nonadiabatic systems, 475B
Nonequilibrium fluids, 39B
Nonlinear convergence acceleration methods, 545A
Nonlinear Schrödinger equation (NLSE), 235A
Nonlocal weighted density approximation (WDA), 333A
Nuclear configuration space, 177A
Nuclear permutation groups, 471A
Nucleophilic attack, 127B

OH vibrations, 758A
Open-chain triplet C_{2h} structure, 119B
Open-shell systems, 363A, 709A
Optimized-Basis-Set Multiconfiguration Spin-Coupled (OBS–MCSC), 535B
Orbital energies, 303A
Orbitals, 587A
Orthogonalization, 587A

Padé scheme, 251A
Perturbation expansions, 251A
Phase space function, 263A
Polarizabilities, 1B, 349A
Polarization correction (PL), 127B
Polarization propagator technique, 1B
